

# Real Estate Data Flowchart

## Preparation

- Automate data ingestion
- Clean, sort, and normalize data

## Fusion

Combine connected types of information like addresses, parcels, and GIS

Go through entity identification process such as owner unmaking

Construct knowledge graph that connects all entities and give closer proximity to those that have something in common

Write custom SQLs that will help automatically pull and update entire set

## Delivery

- Build API that can be used to populate databases, update dashboards, and create visualization
- Construct a data and analytics warehouse

## Consumption

Customize dashboards for each user

Power business intelligence platforms

Train Machine Learning algorithms
